Disassemble Front End:

- 1) Loosen Inner Skirts in the wheel wells – Does not have to be removed
- 2) Loosen bumper mounted to fender
- 3) Take bolts out of bumper and take bumper off the car
- 4) Remove headlights from the car.
- 5) Remove left and right fenders. Estimated Time: 1hr based on 2 people working on car.

Picture of car disassembled.

Cut / Roll Inner Fender

Cut the inner fender. This will give it a better look for show quality cars and looks better than rolling the fender. In our shop this was done with an air saw

To roll the fender use tin snips and cut along the red line in the pic then roll the pieces between the snips inward against the fender.

Installing New Hinges

- 1) Use masking tape and tape the door to the car from the windshield across the mirror down to middle of door.
- 2) Unbolt and remove old hinges
- 3) Use some type of degreaser compound and clean areas around the where the old hinges were bolted to the car because part of this area will now be visible and if it is filthy it will show.
- 4) Place hinge up to the car and screw the bolts in but not tight.
- 5) Once all the bolts are in make sure your fender gaps are correct.
- 6) Once the door is adjusted get inside the car and have a second person hold a flash light up to the mirror area to make sure that there is no light coming through.
- 7) Some vehicles may require door sealing tape to be placed under the weather stripping so there is no wind noise and no water leak.
- 8) Once all door / fender gaps are adjusted correctly tighten bolts.
- 9) Install the shock onto the hinge along with the remaining hardware. (See Picture below for proper hinge assembly)

Reassemble Front End:

- 1) Reinstall Fenders
- 2) Reinstall headlights
- 3) Reinstall front bumper Estimated Time: 1hr based on 2 people working on car.

Your VDC installation is now complete.

If you have any problems while installing the hinges please do not hesitate to contact us here at Wild Child Customs. Please also send us pictures of your completed installation.
